Skype: sofi.kalugina

I'm a Front End software developer. I started learning front end in December 2015, at Brain Academy courses, I studied layout, styling, Less, Grunt builder, and of course JavaScript. At the moment I am studying such technologies as TypeScript, webpack 2, Angular 2.

I am open to new knowledge and technologies, and most importantly - I dream to work in a big team of professionals, from which I could learn a lot, be able to improve my knowledge and skills and could bring benefit to the project with my work.

Also I can speak English very well.

Experience

3. Front End Developer

Personal landing page.

Middle of May 2017 — So far.

The purpose of the project: investigation new pretty technologies and developing my own landing page with examples of my works.

Technical stack:

Programming languages:

- TypeScript 2.2 to ES6

Main Front End technologies:

- Angular 2

- Webpack 2

- HTML 5

- CSS 3

- Stylus

- NodeJS

- ExpressJS

- NMP

VCS:

- GitHub

Responsibilities:

- Organization of dev environment: setting up framework, builder.

- Creating a routing system for new components.

- Creating templates based on mockups own designed.

- Templates layout and styling .

- Creating of application components.

- Creating of application services.

My role:

At the middle of May 2017 I've started developing on my own personal landing page with my portfolio and details description of my experience.

2. Front End Developer

Freelance

Jan 2017 — So far.

Customer: International company with stakeholder and developers from America, China and India.
The purpose of the project: development of product for the accounting of human resources.

Technical stack: Programming languages:

- JavaScript (ES6)

Main Front End technologies:

- Angular 1.6.2

- Webpack

- HTML 5

- CSS 3

- SASS

- Bower

VCS:

- GitLab

Responsibilities:

- Organization of dev environment: setting up framework, builder.

- Creating a routing system for new and current controllers.

- Creating templates based on mockups which designers gave me.

- Templates layout and styling .

- Creating and describing of application controllers logic.

- Interaction with the distributed request system on backend side.

My role:

In this project, I was developing a client side of the application. I worked in big, international and distributed team, which has more than 20 developers, the total number of developers in the project is about 150. I was creating new controllers to supporting new features of the application, as well I've creating services for interaction with the distributed requests system.

1. Front End Developer:

ParaShoes
May 2016 — Feb. 2017

Customer: Ukrainian product company ParaShoes - shoes selling company.
The purpose of the project: development of an Internet showcase of the company.

Technical stack: Programming languages: - JavaScript (ES5)

Main Front End technologies: - Angular 1.5.8

- Grunt

- HTML 5

- CSS 3

- Bower

Main Back End technologies:

- Tornado

- sqlalchemy

Other technologies:

- Vagrant

- Nginx

- PostgreSQL

Builder and VCS (work with pipelines and creating and managing of workers on dev environment):

- GitLab

Responsibilities:

- Organization of dev environment: setting up framework, builder.

- Creating a routing system for future application.

- Creating mockups for application interface.

- Templates layout and styling .

- Creating and describing of application controllers logic.

- Integration with backend of the application.

My role:
On my first project I worked on developing the client part of the Internet showcase. At the beginning of the project there was no designer and I developed mockups, so it's not alien to me. As a result, there were two developers - I was responsible for Front End and one Back End developer with whom I collaborated in terms of integration.
